

Notes from design meeting with Playdale 12/12/2025

Teams meeting

The distance from the hedge line to the big climbing frame is only 0.5m. Because of the fall height, the distance has to be at the very minimum 2m. So either we have to move the whole climbing frame or the hedge line has to be moved back by 1.5m.

Similarly, the baby swings need to have 2m and are only 1.5m from the hedge line.

- He has not quoted to do anything to the big climbing frame until we decide what we want to do with it. Moving it will be a big task.
- He has quoted to **relocate** the tractor, the junior swings, and gravity bowl into the new area.
- He has quoted to **replace** the basket swing, the rotabounce and the baby swings with new equipment in the new area.
- He has quoted to remove the wooden small climbing frame and **replace** it in the new area with a small toddler climbing frame more suitable for the youngest children.
- He has quoted to **install** a bouncy animal on springs in the new area.
- He has quoted for new surfaces under the equipment that needs it including the tractor because children climb on the roof. The new toddler climbing frame needs less of the impact surface because it is only a metre high.

The quote includes taking away the old equipment and waste, and includes a portaloos for the workmen.

If we decide to only commission the equipment, rather than installation as well, then we still get the £2,600 discount on the equipment but there will be smallish delivery charge.
